

What is BPT?

UBI or BioPhotonic Therapy gives HOPE for those who have struggled with a disease/disorder and not found relief!

It is NOT new. It is a proven medical procedure that kills bacterial and virus, helps the body's immune system and rejuvenates properties in the blood. It increases oxygen to the tissues and causes vasodilatation and microcirculation.

Biophotonic Therapy (BPT) is also known by other names such as Ultraviolet Blood Irradiation (UBI) photoluminescence, photopheresis, and photodynamic therapy. This is a process of exposing blood to ultraviolet light rays to stimulate the immune system to destroy any and all pathogens, no matter if they are viral, bacterial, or fungal. BPT is a time tested therapy – in use for over 70 years by physicians all over the world. There are no known serious side effects The therapy creates a strong immune response that is regarded as an “autogenous vaccine”. There have been over 1 million treatments given.

During the treatment, the smaller bacterial and viral cells are targeted and absorb five (5) times as much photonic energy as their healthy counterparts. The healthy cells remain intact while the disease cells are killed and become antigenic. An “autogenous (self-generated) vaccine” is thus produced.

When this “vaccine” is coupled with the photonic energy given off by the treated blood the microbes in the patient's bloodstream are rapidly destroyed via “induced secondary immune reactivation.”

After that simple procedure, then your system works with a new supercharged immune response, greater oxygenation and a balancing of your system.

What Does it Do?

- Kills bacteria and virus in the blood and supercharges the immune system
- Improved circulation
- Oxygenation of tissues.
- Balancing effect (homeostasis)
- Reduction of tissue pain
- Increased tolerance of the body towards radiation or chemotherapy.

- Cardiovascular protection through increased metabolism of cholesterol, uric acid, and glucose
- Anti-inflammatory effects
- Powerful anti-infection properties
- Stimulation for production of red blood cells
- Improvement in the flow and properties of the blood

Conditions that BPT Helps

UBI may be used alone or in conjunction with other treatments for conditions including:

- Allergies – inhaled, food or chemical
- Arthritis – osteoarthritis, rheumatoid or psoriatic
- Autoimmune illnesses – e.g. SLE, RA, Ulcerative Colitis, Scleroderma...
- Cancer
- Candida (yeast) overgrowth
- Acute infections – influenza, cold, viral or bacterial infection
- Eczema & psoriasis
- Fatigue – acute and chronic
- Fibromyalgia
- Lyme disease
- Hepatitis
- MRSA
- Multiple sclerosis
- Herpes zoster and simplex
- Others.....
