

## Joint Restoration

Are you experiencing pain or discomfort within a particular group of muscles, tendons, or ligaments? Whether mild or severe, joint pain can significantly impact not only how effectively you can perform certain activities, but your overall quality of life. The thought of surgery might seem intimidating and might be an uneasy option to consider. Thanks to the advances in regenerative medicine, surgery isn't the only option to remedy joint pain. Regenerative Treatment Centers is proud to offer regenerative therapies including Ozone, PRP and MSC derived treatments for joint pain to help you regain a greater peace of mind toward your everyday life. Often for maximal results we combine these treatment modalities for maximum results.

Regenerative Treatment Centers is your premier destination for the latest in health and wellness solutions. Through our regenerative therapy options, our wellness experts can help you achieve a more comfortable quality of life. Our specialists have developed an outstanding reputation for providing personal attention, unmatched professionalism, and excellent care to all those seeking to enhance their complexion.

### **How do these therapies work for joints?**

Regenerative Joint injections are an all-natural form of medicine that can safely and effectively remedy joint pain without surgery or downtime.

During your appointment, one of our trained specialists will inject into the designated treatment area(s) where joint pain is present. Harnessing the natural healing properties of PRP, Ozone, or MSC signaling therapy, restoring healthy tissue on a cellular level, ultimately easing joint pain or tendonitis pain for greater physical comfort.

Our proprietary protocols utilize MSC signaling therapies, PRP as well as Ozone for accelerated healing and recovery combined or individually based on clinical assessment and need.

### **Are there any risks?**

With these procedures there is virtually no risk of disease or allergic reaction. As well, this treatment for joints or soft tissues does not require making incisions, allowing for a less invasive, safer alternative to a surgical procedure.

### **How many treatments will I need?**

Since each of our patients is experiencing a distinct case, treatment plans will be different for everyone. Once you schedule your consultation, our specialists will review your current medical history and discuss your concerns to properly determine your candidacy and how many treatments you may need to achieve greater everyday wellness. It's important to keep in mind that results will vary.
