

What is Ozone Therapy and How it Works?

Ozone Therapy has historically been used to treat a variety of conditions. More recently, it has been used as a tool for enhancing mitochondrial rejuvenation. By increasing the oxygen level in blood, it oxygenates the tissues in the whole body at a cellular level. Not only does it positively affect the appearance of our skin, but also it supports our body's healing process. It supports blood and liver detoxification, as well as boosts the immune system. At Regenerative Treatment centers, it is administered intravenously or through direct injection into joints or soft tissue such as muscles or tendons. For IV therapeutic purposes, a program of 6-12 sessions is recommended.

Each year we rely heavily on antibiotics to treat various illnesses. Although they help some infections, they do not address viral infections, which are the most common cause of the flu. In fact, antibiotics not only kill off the bad flora in our body but the good flora as well, which greatly weakens our immune system.

Ozone is an anti-bacterial, anti-fungal, antiviral agent and Ozone Therapy offers an alternative without the toxic side-effects of antibiotics. When used as a preventative measure, Ozone Therapy may protect us from contracting an illness that could eventually require antibiotic treatment.

What Could I Expect from the Process?

Ozone therapy treatment sessions are administered in the comfort of our Kansas City office. There are a variety of ways for ozone gas to be administered, whether it is intravenously or directly to the tissue. You can relax as your body begins to receive the additional ozone gas to promote flushing your system and encouraging better overall health.

These therapeutic treatment sessions are often relatively short, and you should be able to return to your normal daily activities. There is no downtime or discomfort associated with the process.

Results achieved with ozone therapy will vary for each person treated and the conditions addressed. Most people begin to enjoy results shortly after treatment. A series of regular treatments is often recommended to encourage optimal treatment results.

Benefits of the Ozone Therapy

- Strengthens the immune system
- Helps liver cleansing
- A supporting therapy for cancer patients
- Improves circulation problems
- Helps fight against and prevent infections
- Useful for anti-aging; delays aging processes
- Helps manage chronic fatigue syndrome and stress
- A supporting therapy for cardiovascular disease

- Prevents and treats viral illnesses such as hepatitis B and C, shingles, cold sores and flu
 - Treats wounds, acne, psoriasis
 - Prevents and treats Rheumatic illnesses
 - Supports diabetes therapies
 - Prevents and treats allergies
